

PAID RESEARCH PARTICIPANTS NEEDED

- **Right-handed** adult (18+) **women** with autism spectrum disorder
- **Right-handed** adult (18+) **women** without autism spectrum disorder and no family history of autism spectrum disorder

**\$100 compensation for each visit
(\$200 total possible)**

Our research aims to understand how brain function changes in women with ASD as they age. By understanding brain function during aging, we will be able to develop interventions targeted for women that will promote improved health and independence.

Study participation is voluntary and will involve 2 visits (2 years apart):

- Cognitive testing (~1 ½ hours)
- MRI (~2 hours)
- Questionnaires (~20 minutes)
- *Optional* questionnaires for a friend or family member (~10 minutes)
- *Optional* saliva sample

To learn more about this study or to enroll:

- Contact the Autism Brain Aging Lab directly at **(480) 727-3970** or **abalab@asu.edu**
