

# Learn about your child's development and academic strengths.

In partnership with UCSD, Southwest Autism Research & Resource Center (SARRC) is examining the developmental progress and benefits of early intervention in children with autism 6-10 years old.

You will receive compensation for your participation.

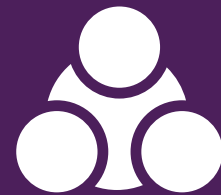

## STUDY SNAPSHOT

- Free comprehensive evaluation provided by a licensed clinical psychologist.
- Questionnaires about a child's treatment, school placement and performance, and specific areas of functioning.
- Visits will be completed on our 16th Street Phoenix campus, following strict COVID safety policies.
- Families will receive \$100 and a written summary of test results.

## WHO WE ARE

SARRC's research program brings together scientists, research methods, and stakeholders to gain a better understanding of possible causes of autism, identify better treatments, and educate others about how to improve the quality of life for those impacted by ASD and their families.
