Study on Investigational Drug for Irritability

The Southwest Autism Research & Resource Center (SARRC) is currently enrolling participants ages 10-12 years old with autism spectrum disorder (ASD) to participate in a study to evaluate an investigational study drug for the treatment of irritability.

STUDY SNAPSHOT

- Participation includes nine, in-person visits at SARRC's Campus at 2225 N 16th St, Phoenix, AZ 85006
- Study participation is expected to last approximately nine weeks
- No cost to participate
- Participants will be compensated for their time and travel

ABOUT THE STUDY DRUG

This investigational study drug has been approved by the FDA for treating other psychiatric conditions in adults. This study is exploring its potential as a treatment for autism.

WHO WE ARE

SARRC's research program brings together scientists, research methods, and stakeholders to gain a better understanding of possible causes of autism, identify better treatments, and educate others about how to improve the quality of life for those impacted by ASD and their families.

Study sponsored by Intra-Cellular Therapies, Inc.
